HOW TO USE THIS CHART

This is your own record of the course — not a replacement for your Standard Celeration Chart, which is still where your **daily** numbers go. When you solve a puzzle, the “You did it!” box shows your time, your **tiles per minute** (or **places per minute** on a map), and your moves (or tries). Fill in a row here the day you first reach its **aim**: the date, your per-minute rate, your moves (tries on a map), and your initials. **Only Hard mode counts.**

Example of a completed row:

4	World Map	Picture · 18	30–25	Sep 12	27	24	J.W.
---	-----------	--------------	-------	--------	----	----	------

#	Puzzle	Kind · tiles	Hard aim / min	Date met	Per min	Moves	Init.
1	Mediterranean Blank	Picture · 18	30–25				
2	Homer’s Greece: Places	Map · 18	20–15				
3	The Ancient Mediterranean	Map · 24	20–15				
4	World Map	Picture · 18	30–25				
5	World Map: Harder	Picture · 32	30–25				
6	The Trojan War	Story · 18	15–10				
7	Trojan War Battlefield	Picture · 16	20–15				

Aims count only in **Hard** mode. They are starting hypotheses, not pass/fail cutoffs — see your Standard Celeration Chart for how you’re really trending. Rates are **tiles per minute** for picture and story puzzles and **places per minute** for map puzzles. *Picture*: put the pieces of a picture back together. *Map*: drag names onto a blank map. *Story*: put the story cards in order. Generated from the menu list (puzzles/index.json) — keep in sync if your class’s puzzles change.
